

DISCOVERY POWER

Fast Forward to Data Center Intelligence.

Multi-Purpose Agent Network Intelligent Databots

- Workload balancer
- Automatic agent update and failover management
- Included in the Discovery suite (250 jobs/day)

Single Point of Information Analysis Functions Boost Security

- Process documents and log files across all platforms, incl. SAP
- Audit-compliant security concept
- Beta Log Formatter (LGF)

360° Compliance Audit Support Improved Security and Convenience

- Beta 96 fully integrated
- Complies with ISO 2700x
- IT List of Basic Security Measures (BSI)

Discovery supports the new z/OS 2.1 functions. Simply smarter.

The Discovery agent network connects Unix, Linux, Windows and z/OS, making it easy to utilize distributed data for central processes. Even applications (e.g. SAP) can be controlled and managed across multiple platforms.

- Integrated compliance checks (product self-monitoring in connection with meaningful audit reports)
- Utilization of the 'Unique Correlator ID' z/OS 2.1 feature in reports
- Legally prescribed IT basic protection monitoring for z/OS (e.g. automation of time-critical checks acc. to ISO 27001/2)

WHY DISCOVERY?

ECONOMIC

Fast Forward

- Reduced TCO thanks to zIIP and compression
- Maximized utility by supporting the integration of customer-developed applications
- Superior business value thanks to workload balancing

INNOVATIVE

Discovery Power

- Optimized competitive power of data centers
- Full z/OS 2.1 support
- 360° integrated IT compliance monitoring

RELIABLE

100% availability

- Safeguards critical business processes (failover)
- Extreme performance and scalability
- 10+ million logs, 1+ million jobs per day, 20,000 events per day per customer

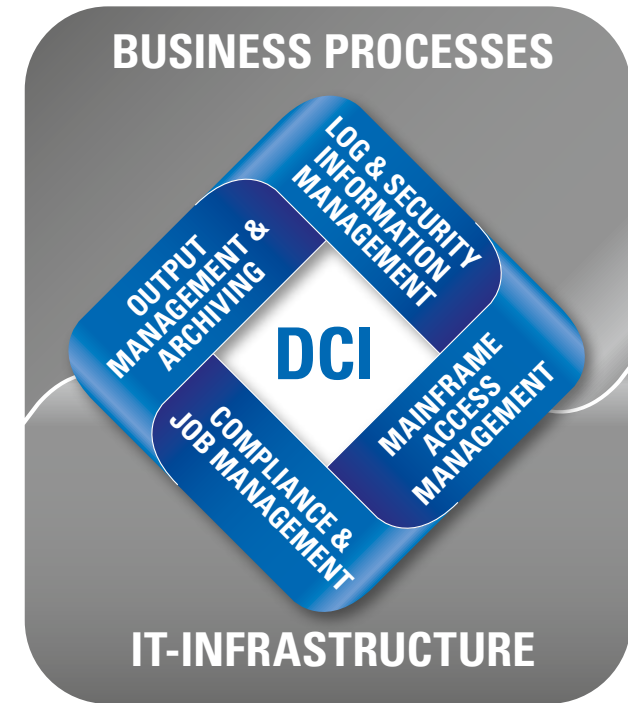

The Discovery generation streamlines and optimizes all business-critical IT processes.

Over 80 New Functions Deliver '30% Superior Return on Data'

There are many treasures hidden away in corporate data, such as potentials for optimization – and you can tap into this goldmine by analyzing data across all corporate platforms. However, there are obstacles to be overcome, including the rapid growth of non-z/OS data. Beta Systems' new Discovery generation provides innovative technology designed to 'unearth' these treasures and boost the corporate return on data.

More than 45 Functions to Meet Rising Compliance Requirements

The upcoming IT security law will force companies operating critical infrastructures to have their technical and other security measures checked by approved auditors at least once every two years. In this context, Discovery offers various functions for implementing efficient, automated compliance monitoring.

Highly available applications protect critical data (failover).

Automatic software updates for thousands of agents.

New Features in Discovery.

Log Management – New in Beta 92 Discovery

The multi-platform job log management system for seamless production processes.

New features in Discovery:

- Agent auto update
- Various extensions for improved event & e-mail handling
- Improved audit-compliance for cross-platform job networks
- Robust information transfer to z/OS

Included in Discovery:

- Event processing
- SLS support as part of a public key infrastructure (PKI)
- Event processing for the programming environment run on z/OS

Output Management – New in Beta 93 Discovery

The output manager prints, distributes and archives vast numbers of documents – and offers comprehensive search functions.

New features in Discovery:

- E-mail signatures are inserted into auto-generated e-mails
- Improved AFP handling – optimized output
- New batch search function – full-text search in the terabyte range

Included in Discovery:

- Extended input
- Batch Resource Compressor
- Support of the SAPI interface (z/OS 2.1 standard)

9 of Germany's 10 largest credit institutions use Beta Systems solutions to process their information and documents securely and efficiently.

New Features in Discovery.

Quality Management – New in Beta 91 Discovery

Standardized checking of data and logs processed with z/OS.

New features in Discovery:

- Discovery agent for quality assurance and harmonization of non-z/OS workflows
- Automatic quality assurance for SAP data
- Fully integrated into the Discovery agent network
- Extended functionality for hash and counting routines

Included in Discovery:

- BSA v6
- Discovery agent network
- Compliance Auditor
- Single Point of Information (SPIN)

Access Management – New in Beta 88 Discovery

Transparent management of the IBM Resource Access Control Facility (RACF).

New features in Discovery:

- Improved Unicode support (DBCS)
- Auditor and RACF real-time monitoring delivered as a package
- Interface to Garancy Access Intelligence Manager

Included in Discovery:

- Beta 89 fully integrated
- Real-time monitoring
- RACF drill-down facility
- Discovery agent network

50% of Europe's largest banks secure their business processes with solutions from Beta Systems.

100% Service

- Custom implementation services based on a proven method
- Compliance consulting for maximum process reliability
- Available 24/7, serving customers around the clock
- Highly skilled and experienced migration expert with a track record of over 100 migration projects involving up to 15 systems
- Administrator and security training

Beta Systems is a leading provider of data center solutions designed for international companies and industries that process large volumes of data. Our highly scalable products deliver proven standard software for application in complex IT environments. Beta Systems is proud to offer the most comprehensive cross-platform data center solutions in the market.

Discovery Service Packages

- We plan your Discovery migrations
- We set up your agent network
- We define and implement your IT basic protection requirements (ISO 2700x)
