IT-INFRASTRUCTURE

DATA CENTER INTELLIGENCE

Fast and flexible IT is critical to your success. Beta Systems Software brings speed and efficiency to your IT to ensure consistent, reliable, cost effective, and timely results with our solutions. Our Solutions are the most technologically advanced portfolio of essential products for output, log, workload and security management for the intelligent datacenter. Be part of IT.

Output Management & Archiving

Our output management and archiving solutions cover the entire process chain of document-based information processing – from data preparation and distribution through to audit-compliant archiving.

- › Document management and optimization
- › Output provisioning and multi-channel distribution
- › Efficient and audit-compliant document archiving
- › Web & Java Client

Log & Information Management

Our log management system searches and documents application logs across all platforms according to predefined patterns (e.g. according to error messages). The data is available in a transparent and highly structured format to facilitate analysis and help optimize corporate processes.

- › Fully automated, company-wide capture of log information
- › Automatic log analysis and proactive alerts
- › Audit-compliant archiving of compliance-relevant information

Workload Automation

Our workload management solutions maximize your process efficiency by implementing functions for the automatic, cross-platform control and safeguarding of all business-critical data processing workflows.

- › X-Platform Job Scheduling and Balancing
- › Automatic job monitoring
- › Quality assurance for input and output data

z/OS Access Management

We offer solutions for user-friendly RACF administration. Comprehensive auditing and real-time monitoring of RACF events boost the security and flexibility of your z/OS platform.

- › Leading RACF administration solution
- › Increased security level of the z/OS platform and improved flexibility
- › Comprehensive audit and real-time monitoring of RACF events
